About Me: I'm a super enthusiastic Frontend Developer with two years of experience creating awesome, fast, and interactive user interfaces. I really love making things look good and work smoothly! My go-to tools are React, JavaScript, HTML5, and CSS3.

My Journey So Far:

- **University of São Paulo:** I graduated with a B.Sc. in Information Systems in 2021. Learned a ton there!
- **Web Creators Ltda. (2022-Present):** Here, I'm a Frontend Developer, and I get to build and keep up the user interfaces for e-commerce sites. I use React, Redux, and TypeScript – we even managed to make our pages load 15% faster! I also make sure everything looks great on any device and browser, and I connect our UIs to all the backend stuff with RESTful APIs. Oh, and I write tests (with Jest and React Testing Library) to make sure everything's working perfectly.
- **Startup Innova (2021-2022):** This was my first gig as a Junior Web Developer. I helped create reusable bits of code and even squashed some bugs!

My Toolkit: React.js, Redux, JavaScript, TypeScript, HTML5, CSS3, Git, RESTful APIs, Responsive Design, Jest, Agile.

When I'm Not Coding: I love getting outside and playing some futebol (soccer!) with my friends. I also enjoy trying out new recipes in the kitchen and getting lost in a good book.
